

# How to Draw the Hand

Use 4", 6", and 8" dia. circles OR jar caps of similar sizes to draw circles A, B, and C.

Draw the small ovals for the fingertips and the joints/knuckles. Add connecting straight lines from the sides of the fingertips to the smallest of the three large circles, as in the lower left diagram.

Now look at your own hand and fill in the details and erase the guidelines that helped you in structuring the hand.

**SKELETAL HAND** (27bones)

The hand is one of the most useful structures of the human body and injuries to the hand should be taken care of carefully and immediately.
